TS-04

**Flexible Package
Seal Strength Measurements:
Burst, Creep, Creep to Failure**

Use the TS-01 with the TME BT-1000 Automated Package Tester to test flexible porous peelable pouches sealed on three sides. The TS-01HP can be used for non-porous welded pouches up to 30 psi. The 12-inch open package fixture provides a pneumatically driven clamp that will seal the open end of a flexible package during the inflation testing for package seal strength in accordance with ASTM F-1140.

TS-04 24" Manual
Open Package Fixture

A similar seal is obtained with a manual clamp on the 24-inch model. The flexible materials of the clamp surfaces conform to the installed supply and sensor tubes, sealing the package material and test assembly. The supply/sensor probe is sealed on its outer surface to the inside of the package while it communicates with the internal volume, establishing a direct flow path to the measuring instrument.
